

YANF - January 2015  
Yet Another NetSuite Feature :)

Unsubscribe

Hello to all our NetSuite customers,

NetSuite was our first web services automated ERP integration and it's our largest enterprise-level fully automated platform. We know you love NetSuite and our job is to make that an even better experience. We care about your needs and that's our sole focus. It drives our support team, our implementation team and definitely our engineering teams.

Can you help us ring in the new year by referring us through the button below to some of your NetSuite-using friends? We have a great, fully-automated integration and we want to share it with everyone.

If you have an interest in these or anything else, you can reach us at any time at [help@nexonia.com](mailto:help@nexonia.com).

## WHAT'S NEW THE WEB

- **Salesforce Integration:** We've had some Salesforce integration for a while, but this year we're taking it to a new level. Q1 and Q2 will see more features added throughout, to the point where we'll be able to post expense costs against Salesforce Accounts and Opportunities. This month we've enhanced our Account and Opportunity syncing and February through the end of Q2 will see a lot more refinements coming.
- **Credit Cards:** We have over 30,000 credit card transaction sources (including all corporate cards), but we're going back and refining our card integration capabilities to provide more easy-to-see status levels to make your administration even easier.
- **VAT on Split Items:** We changed our entire split model here to support better pre-tax display and calculations for all our international customers. Combined with our awesome tax calculations (including on mobile) this makes us the world's best VAT tracking system we've ever seen (ERPs included) – well, we were that even before this enhancement. :)
- **Annual Spending Limits by Category:** We've implemented the ability to set per-user spending limits for expense categories and to use these limits in submission limits for expenses.

## WHAT'S NEW ON MOBILE

- **Nexonia Expenses 10 is Coming Soon:** We can't wait to release our new UI for mobile expenses. It's clean, it's beautiful and it's functional. You'll see it coming in February for Android and March/April for iOS. In case you were wondering, we build for Android first because Apple has a mandatory 5-7 day waiting period

before our app changes are approved and with new big changes we prefer to build first for Android because there's no waiting period. If we make a mistake, we don't want our customers inconvenienced for almost a week, which would be the case for an iOS issue.

- **Nexonia Timesheets New UI:** We've released our new UI out for Android and it's beautiful. iOS is in testing and we expect to post it to Apple for their review within the next week.
- **Nexonia Time Off:** We're starting work on this in February!

## NEW FEATURES FOR NETSUITE IN JANUARY 2015

- **Expense Categories by Subsidiary:** We have a new feature where you can fine-tune your expense categories by subsidiary so that not all categories are available to all subsidiary employees. This is great for things like Mileage where you want to show only the mileage category relevant to a certain subsidiary's employees.
- **Accounts Payable:** We have a number of new features coming soon that we have under development, with the biggest being our new Accounts Payable module for NetSuite, coming in February! Our launch feature list is almost complete, as is the web services integration with NetSuite, so it's headed to QA in the next couple weeks and then we'll be releasing it. We can't wait!
